SAP RFC Function Module as REST GET service

4 1 8,718

Hi All,

This is my first blog.

This is a step by step example of how to consume RFC function module as REST Service using GET operation.

System: **SAP PI 7.4**

This example will follow this workflow:

3rd Party System <-> PI RESTAdapter (*JSON*) <-> PI Mapping (*XML*) <-> PI RFC Adapter(*XML*) <-> SAP R3

Bussiness Case Description

A 3rd party system consumes a REST service which published in SAP PI to get the company name and the city.

Scenario – We are going to pass Company Code(BUKRS) as a parameter (GET operation) and get the Company Name and City as output.

Import the Function Module to ESB.

Structure WSDL

☐ Sensitive Data

Display Message Type **Request**

Search Go

Name	Category	Type	Context Object	Description
▼ ZGET_HOTEL_DTLS	Element			
BUKRS	Element	xsd:string		Company Code

Structure WSDL

☐ Sensitive Data

Display Message Type **Response**

Search Go Settings...

Name	Category	Type	Occurrence	Default	Details	Description
▼ ZGET_HOTEL_D	Element					
BUTXT	Element	xsd:string	0..1		maxLength="25"	Name of Company C
ORT01	Element	xsd:string	0..1		maxLength="25"	City

I used external definitions as data types.

Category Messages From All Available Global Elements

File MainSchema.xsd

Source

Imported Document Messages WSDL External References

Search Go

Name	Category	Type	Occurrence	Default	Details	Description
▼ ZGET_HOTEL_DTLS	Message					
▼ ZGET_HOTEL_DTLS	Element		1			
BUKRS	Element	xsd:string	1		maxLength="4"	Company Code

Category Messages From All Available Global Elements

File MainSchema.xsd

Source

Imported Document Messages WSDL External References

Search Go

Name	Category	Type	Occurrence	Default	Details	Description
▼ ZGET_HOTEL_DTLS.Response	Message					
▼ ZGET_HOTEL_DTLS.Response	Element		1			
BUTXT	Element	xsd:string	0..1		maxLength="25"	Name of Company C
ORT01	Element	xsd:string	0..1		maxLength="25"	City

Create Service Interface. Use External Definitions for the Request and Response.

Definition | **WSDL** | **Matching Service Interfaces** | **Classifications**

Attributes

Category: Outbound

Interface Pattern: Stateless

Security Profile: Low

☐ Event interface ☐ Sensitive Data

Operations

Operation SI_COMP_NAME_OB_REST

Description:

Release State: Not Released

Attributes

Operation Pattern: Normal Operation

Mode: Synchronous

Messages

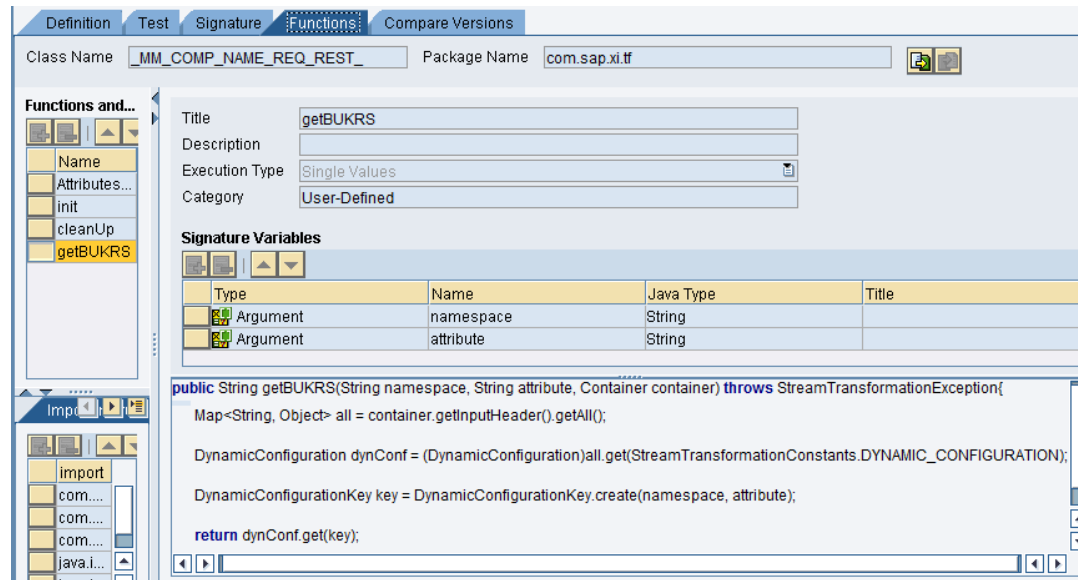

Role	Type	Name	Namespace
Request *	External Message	ZGET_HOTEL_DTLS	urn:sap-com:document:sap
Response *	External Message	ZGET_HOTEL_DTLS.Respurn:sap-com:document:sap	urn:sap-com:document:sap
Fault	Fault Message Type		

Create Message Mapping for Request and Response. In Request Mapping Add Custom Function.

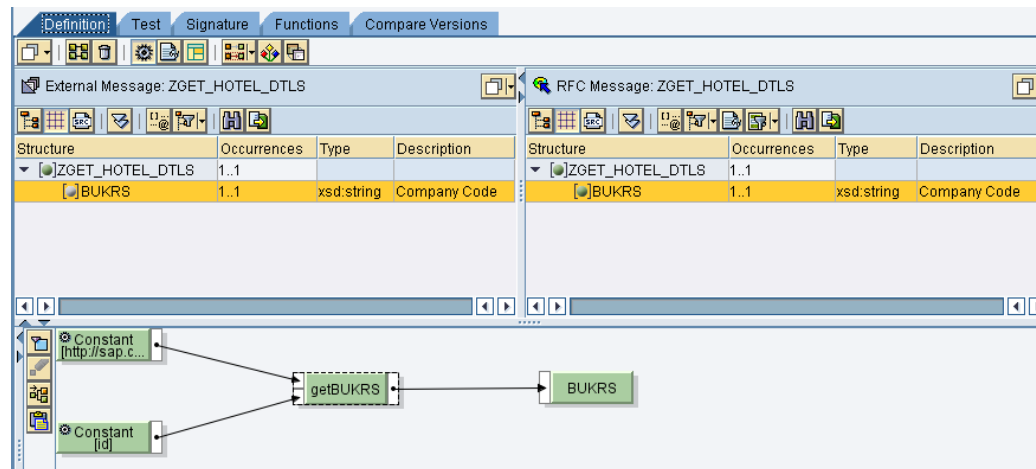

I have added function named **getBUKRS** with two parameters which named **namespace** and **attribute**.

Added following code into the function body. (This function is usnig for extract the parameter from the URL)

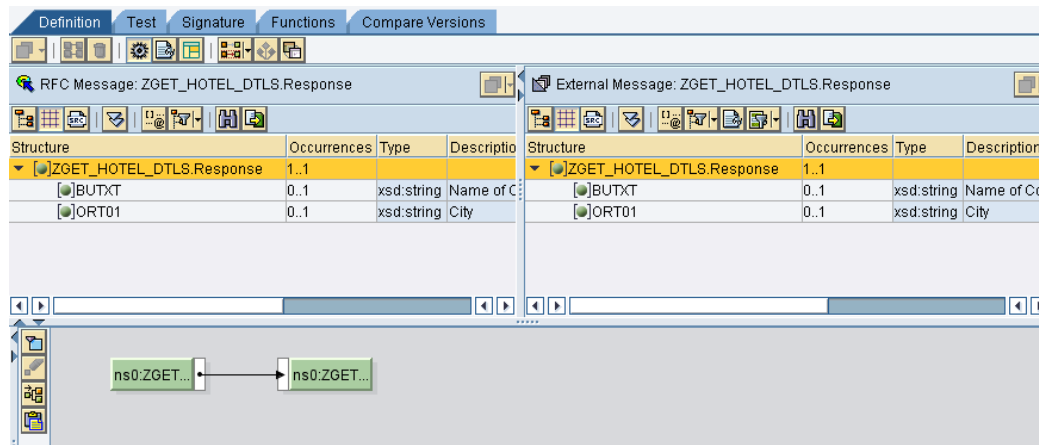

```
Map<String, Object> all = container.getInputHeader().getAll();
DynamicConfiguration dynConf =
(DynamicConfiguration)all.get(StreamTransformationConstants.DYNAMIC_CONFIGURATION);
DynamicConfigurationKey key = DynamicConfigurationKey.create(namespace, attribute);
return dynConf.get(key);
```

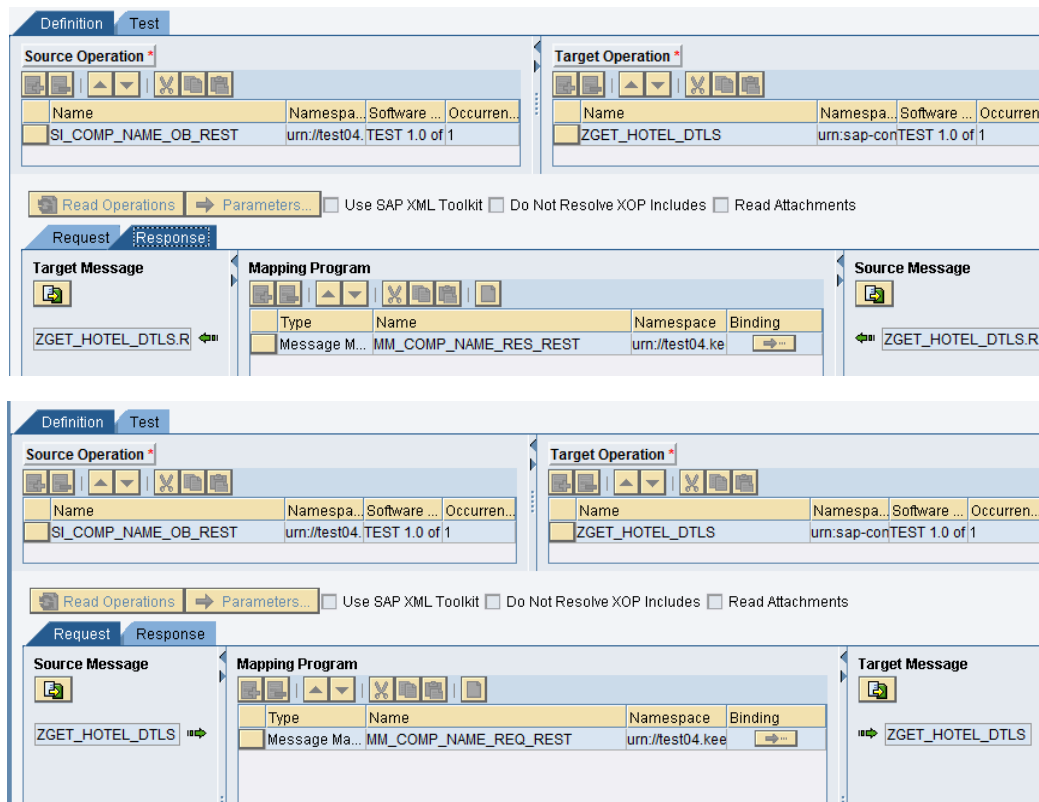

Map Request as following. Pass <http://sap.com/xi/XI/System/REST> and "id" for the constants.

Map the response.

Create Output Mapping.

Go to Integration Builder and create **receiver** and **sender** communication channels.

Receiver-

Parameters	Identifiers	Module
Adapter Type *	RFC	http://sap.com/xi/XI/System
<input type="radio"/> Sender <input checked="" type="radio"/> Receiver		SAP BASIS 7.40

Hi experts!!

I have a similar case, I am trying to consume RFC function module as REST Service but using a POST operation. I think I am not able to construct the request message in JSON, I am getting the following Error message in SOAPUI:

"InterfaceDetermination did not yield any actual interface"

Can someone help?

Thank you,

A bit late, but maybe useful to others searching. This is possible. see <https://sapintegrationhub.blogspot.com/2019/08/end-end-scenario-with-rest-sender.html>

Hi,

Does anyone know how to do the above where the RFC has 4 import parameters? There are many examples of where the RFC has 1 import parameter, but none where the RFC has more than 1 import parameter!

it is possible. Below is a external definition of multiple import parameters. May be I can help you, If you are more specific on your problem,
